

Metropolitan Wastewater

Metropolitan Wastewater

Mission Statement

Provide the public with a safe, efficient, and cost-effective regional sewer system that protects the environment, supplements our limited water supply and meets regulatory standards.

Department Description

The City of San Diego's Metropolitan Wastewater Department (MWWD) provides regional wastewater treatment and disposal services for approximately two million people living and working in 16 local cities and districts. This 450 square mile area is defined by Del Mar to the north, Alpine and Lakeside to the east, and the communities bordering Mexico to the south. MWWD manages all of the resources needed to operate and maintain the metropolitan sewerage system and provides for appropriate new infrastructure capacity to accommodate regional growth and economic vitality while protecting water quality and the environment. The Department is also responsible for operating and maintaining the Municipal Sewerage Collection System for the City of San Diego.

Budget Dollars at Work

Nearly 3,000 Miles of municipal sewer system mains in service

21.50 Miles of sludge disposal lines in service

73,000+ Million gallons per year in total metropolitan sewage flow treated

9.00 Miles of ocean outfall line in service

83 Sewer pump stations in service

Service Efforts and Accomplishments

MWWD has made significant strides toward meeting the Mayor's Goal #4: Clean up our beaches and bays; and Goal #9: Pursue energy independence. In support of the Mayor's Goal #4, sewer spills were reduced from 316 in Fiscal Year 2001 to 226 in Fiscal Year 2002. This substantial reduction in sewer spills reflects the significant acceleration in sewer pipeline condition assessment, cleaning, repair, rehabilitation and replacement over the past year. The nation's first Flow Monitoring Alarm System has been in operation since September 2000, allowing the Department to monitor wastewater flow conditions in major sewer lines to enhance the ability to detect major sewer overflows or potential spills. In addition, the Centralized Operations Management Network (COMNET) provides the ability to monitor and control sewage flows in the greater San Diego Metropolitan

Sewerage Network from a central control and information center, further promoting greater responsiveness and reliability of the sewerage system. In support of the Mayor's Goal #9, the Point Loma Wastewater Treatment Plant (PLWTP), the North City Water Reclamation Plant (NCWRP), and the Metro Biosolids Center (MBC) all utilize co-generation facilities, converting methane gas into electrical and thermal energy, saving ratepayers millions of dollars while reducing power consumption from the grid. A hydroelectric power generation facility is also in operation at the Point Loma Plant. Additionally, MWWD is a participant in San Diego Gas and Electric's Rolling Blackout Reduction Program. In case of a power outage, certain facilities and sewer pump station electric loads are transferred remotely to their respective emergency generators.

Future Outlook

Strategic Business Plan

The goal of the Metropolitan Wastewater Department's Strategic Business Plan is to ensure that the ratepayers and other key stakeholders receive the most effective wastewater services possible. The plan is a 10 year integrated projection of business goals and objectives covering all aspects of infrastructure planning, financing, operations and maintenance, customer service, and employee team building. Strategies are developed and reviewed each year in the context of supporting the Department's stated vision and mission as well as the goals of the Mayor and City Council.

The following items relate to the Mayor's Goal #4, Clean up our beaches and bays.

Increased Reclaimed Water Capacity – South Bay Water Reclamation Plant

The South Bay Water Reclamation Plant (SBWRP) began operation in June 2002. Wastewater is treated to the tertiary level and then disinfected by irradiation with ultraviolet light. The reclaimed water is available for use as plant process water and may also be marketed for industrial, agricultural, and landscape uses. Construction of the Otay River Pump Station has begun, with expected completion in December 2003. The addition of this pump station will allow the SBWRP to run at full capacity, reclaiming up to 15 million gallons of water per day (MGD). The full operation of the 30 MGD NCWRP and the 15 MGD SBWRP will enhance opportunities for maximizing the beneficial use of reclaimed water.

Beneficial Reuse of Biosolids

MWWD's Operations and Maintenance Division has been working with the Environmental Services Department and the City's contractor for biosolids disposal on a cost-

Metropolitan Wastewater

effective method to beneficially use our biosolids. The biosolids generated by the treatment processes at the PLWTP and the NCWRP are sent to the MBC for dewatering, processing, and preparation for final disposal.

With MWWD's support, the contractor received tentative approval from the San Diego Regional Water Quality Control Board to initiate a demonstration project that utilizes biosolids as an alternative daily cover at the Otay Landfill. The demonstration project is currently in progress and is producing benefits for both MWWD and the contractor. If the demonstration project is successful and the contractor receives approval, 50% of the biosolids processed at the MBC will be diverted to beneficial use in calendar year 2003.

International Cooperation

The ongoing partnership between San Diego and Tijuana, Mexico, to enhance the collection and treatment of the region's wastewater and to reduce environmental impacts will continue. As part of this collaborative effort, the increasing regional benefits include the potential sale of reclaimed water and the continuing agreement for the use

of the emergency connection. The Environmental Monitoring and Technical Services Division is also providing training and assistance for their Mexican counterparts in controlling industrial inputs to the sewer. This work is being funded by the State of California.

Spill Prevention/Management Efforts

New efforts are being made to prevent/manage sewer spills in remote areas. An Aerial Remote Sensing Pilot Project will utilize San Diego Police helicopters to provide real time thermal imagery and serial videography to detect sewage spills. The Collection Overflow Prevention System is an additional pilot project designed to detect and prevent potential sewer spills by installing floats and sensors in manholes located in remote areas. The pilot project is scheduled for completion in Fiscal Year 2003. A Mobile Data Unit (MDU) Field Project has been designed to allow field crews to collect and manage more accurate data from the various canyon inspections. The initial phase of the MDU project has been completed. Phase II of this project is being completed during canyon maintenance activities in Fiscal Year 2003.

Division/Major Program Descriptions

Administration

Information and Organizational Support

The Information and Organizational Support Division manages programs designed to facilitate the Department's mission statement. Such programs are focused on strategic planning, developing employee/organizational resources, implementing an environmental management system, fostering safe work environments and enabling the most appropriate technical solutions. Strategic Planning channels departmental efforts toward continuous improvement of effective business practices. Employee/Organizational Resources provides personnel/management guidance and career development, and administers the Department's health/medical program. Environmental Management Systems maintains the established ISO 14001 Certifications from the International Organization for Standardization in Geneva, Switzerland and works to expand the program department-wide. ISO Certification provides structure for an environmental management system that ensures MWWD's operation processes are environmentally safe and effective. Safety and Training coordinates training and provides safety oversight to foster a safe and productive work environment. Technology Services manages the design, implementation and support of reliable technologies in a seamless, consistent manner.

Engineering and Program Management

The Engineering and Program Management Division administers and implements the Metropolitan and Municipal Wastewater Master Plans, which entail the planning, design, and construction of high quality, cost-effective and environmentally sound wastewater treatment and collection systems. Additionally, this Division provides planning and predesign of trunk sewers and pump stations, analysis of spill data, coordination of sewer main televising, and implementation assistance with the accelerated spill reduction and competitiveness implementation plan.

Services and Contracts

The Services and Contracts Division maintains sewage flow monitoring and provides data analysis in order to prepare reasonable and accurate flow reports for the City of San Diego, Participating Agencies, and municipal commercial customers. The Division also administers Department budgets, grant development, contract management, and MWWD's Equal Opportunity Contracting Program.

Capital Improvements Program

MWWD's Capital Improvements Program provides design and construction for treatment plants, pump stations, system upgrades, plant expansions, pipelines and other facilities and conducts special studies designed to maintain the efficiency of the metropolitan and municipal sewerage system. Design work is accomplished in-house or is contracted to private engineering firms. This Program provides for the rehabilitation, replacement and expansion of all wastewater collection system components by City forces and contractors.

Operations and Maintenance

The Operations and Maintenance Division is responsible for the operation and maintenance of all wastewater treatment facilities including treatment and water reclamation facilities, major pump stations, and biosolids processing. The Division is the first publicly owned wastewater treatment operation in the nation to receive ISO 14001 Certification.

Metropolitan Wastewater

Division/Major Program Descriptions (continued)

Environmental Monitoring and Technical Services (EM&TS)	<p>The EM&TS Division carries out several crucial programs in support of the treatment and disposal of wastewater. These include the Industrial Wastewater Control Program that regulates industrial discharges to the sewers, thereby preventing toxic substances from passing into the ocean, interfering with treatment processes, or contaminating the biosolids that result from treatment processes. Additionally, EM&TS operates a comprehensive ocean monitoring program to evaluate the effects of discharge into the Pacific Ocean from the City's wastewater treatment plant at Point Loma. It provides laboratory testing for process control and regulatory reporting purposes, ensures compliance with all regulatory permits, and oversees actions necessary to maintain the modified permit for the Point Loma Wastewater Treatment Plant. This Division has also obtained ISO 14001 Certification.</p>
Wastewater Collection	<p>The Wastewater Collection Division provides the ongoing preventive cleaning, maintenance, and repair of the municipal collection system, including emergency removal of sewer line stoppages, equipment overhaul and repair, on-site facility inspections, and maintenance of the structural integrity of sewer mains and manholes in the collection system. Additionally, the construction section of this Division performs repairs and replacement of sewer laterals in the public right-of-way areas. The Division also administers the Food Establishment Wastewater Discharge Permitting Program, which is responsible for permitting and compliance monitoring of food establishments to minimize the discharge of grease into the wastewater collection system.</p>

Metropolitan Wastewater

Key Performance Measures

	FY 2002 ACTUAL	FY 2003 BUDGET	FY 2004 PROPOSED
TREATMENT AND DISPOSAL			
Unit cost for combined Point Loma Wastewater Treatment Plant activities per million gallons of sewage treated. ⁽¹⁾	\$207	\$182	\$213
Unit cost for combined Metropolitan Biosolids Center activities per dry ton of biosolids processed and beneficially reused.	\$357	\$293	\$298
COLLECTION AND TRANSMISSION			
Miles of sewer mains replaced/rehabilitated/spot repaired	28.00	41.00	52.00
Number of sanitary sewer spills per 100 miles of pipe ⁽²⁾	7.81	9.10	8.00
OCEAN ENVIRONMENTAL MONITORING & PROTECTION			
Number of Ocean samples taken and analyzed ⁽³⁾	16,491	16,240	10,353
Number of sanitary sewer spills to reach public water ⁽⁴⁾	21	27	25
SAFETY OF OPERATIONS			
Departmental Incidence Rate ⁽⁵⁾	6.83	9.00	9.00

⁽¹⁾ Budget variations from year to year can occur with this output measure due to the somewhat volatile nature of certain non-discretionary accounts (accounts estimated and allocated citywide rather than by individual departments) such as energy and water. Additionally in Fiscal Year 2004 the cost of Ferric Chloride has increased by \$1.2 million or 60% and permits by \$0.2 million or 500%.

⁽²⁾ The projected number of sanitary sewer spills per 100 miles of pipe in Fiscal Year 2004 represents the commitment made by the Metropolitan Wastewater Department to the Mayor and City Council in Calendar Year 2001 to reduce spills to the public water by 25% in Calendar Year 2004. The goal was calculated off the base year number of 365 spills and represents a maximum number. At all times, the Department strives to reduce spills below this target goal.

⁽³⁾ The method for counting "ocean samples taken and analyzed" has been modified for Fiscal Year 2004 to better correspond to the sampling requirements specified in the City's NPDES permits for Point Loma and South Bay wastewater discharges. Although the new tracking procedure lists fewer samples than in previous years, it does not reflect an actual reduction in sampling effort. Instead, the lower numbers represent the elimination of subsampling for same data types (e.g., CTD water column profiles) that was included previously due to the interpretation and reporting process.

⁽⁴⁾ The projected number of sanitary sewer spills to reach public water in Fiscal Year 2004 represents the commitment made by the Metropolitan Wastewater Department to the Mayor and City Council in Calendar Year 2001 to reduce spills to the public water by 25% in Calendar Year 2004. The goal was calculated off the base year number of 34 spills and represents a maximum number. At all times, the Department strives to reduce spills below this target goal.

⁽⁵⁾ Incidence Rate is based on the number of recordable injuries in a given period of time multiplied by 200,000, the number of hours worked in that period. The 200,000 figure is the base for 100 equivalent full time employees working 40 hours per week for 50 weeks per year. The latest National Incidence Rate figure for the Sanitary Services Industry is 9.00 as of Calendar Year 2001 and at all times the Department strives to reduce incidences below this figure.

Excludes expenditures and positions associated with the Capital Improvements Program

Metropolitan Wastewater

Fiscal Year 2005

METROPOLITAN SEWER FUND

Administration - Metro -
Information and Organizational Support
Reduction of prior year safety supplies.

Reduction for data processing support.

Increase of support for anticipated Five-Year Waiver application costs.

Services and Contracts
Reduction in equipment outlay related to purchase of five flow meters in Fiscal Year 2004.

Additional funding for purchase of five flow meters and associated maintenance.

Additional funding related to increased debt service requirements.

Engineering and Program Management
Reduction in miscellaneous contractual services.

Adjustment for increased data processing support.

Environmental Monitoring and Technical Services - Metro -
Reduction of rent for Driscoll Wharf facilities due to NTC move.

Adjustment for increased data processing support.

Increase in funding support based on the City's agreement with the Southern California Coastal Water Research Program.

Reduction of onetime expenses associated with the Division's move to NTC.

Metropolitan Wastewater

Metropolitan Wastewater

Fiscal Year 2005

METROPOLITAN SEWER FUND

Operations and Maintenance - Metro -

Reduction of 2.00 Plant Operators at South Bay Water Reclamation Plant.

Adjustment for increased data processing support.

Increase in chemicals and electricity associated with increased water reclamation.

Increase in services to repair and maintain equipment at North City Water Reclamation Plant.

Increase in contractual services and chemicals at Metro Biosolids Center.

Increase in services to repair and maintain equipment at Metro Biosolids Center.

Increase in contractual services and chemicals at South Bay Water Reclamation Plant.

Annualization of support including electricity for Otay River Pump Station.

Increase of electricity at Pump Station 1 and 2.

Increase of potable water at North City Water Reclamation Plant.

MUNICIPAL SEWER FUND

Administration - Muni -

Information and Organizational Support

Increase of support for anticipated Five-Year Waiver application costs.

Reduction of prior year safety supplies.

Adjustment for reduction in data processing support.
